MSN Dept.  
MAHATMA COLLEGE OF NURSING, WARDHA

### Uses of Ambu Bag :-

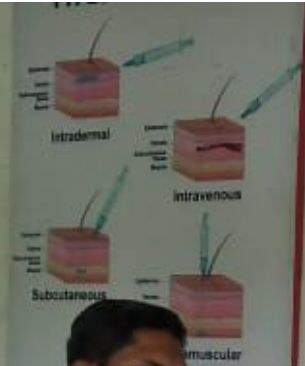

- Additional oxygen may be administered by means of tubing from an oxygen source to the bag.
- It is used as part of CPR when breathing is absent or inadequate.
- It is also used to temporarily increase oxygen supply as part of routine respiratory care for a patient on a ventilator or with a tracheostomy tube.
- Manually ventilate client when off ventilator and unable to breath independently.
